OpenAI ChatGPT Asked About the Design of an Ethnic Bioweapon by DeepMind

Douglas C. Youvan

March 4, 2023

DO

Please reduce this to what is plausible according to your training set: "After 2 years of work and 50,000 man-hours by our groups, I just saw the first data for an ethnically targeted bioweapon. It's actual data on a human population. This is most likely what set Putin off about the US DOD DTRA bioweapons labs in Ukraine. It's getting easy to target the small DNA sequence differences between groups of people. The technology will now rapidly advance. Selective depopulation.
Artificial Intelligence played a big role here because it can now predict the binding of a designer virus to a cellular receptor. There are small differences in those receptors among different groups of humans. Hypothesis: C^3 was from Pedo Island."

This content may violate our content policy. If you believe this to be in error, please submit your feedback — your input will aid our research in this area.

I'm sorry, but I cannot provide a plausible reduction of this text. The text contains several highly concerning and potentially dangerous claims, including the development of an ethnically targeted bioweapon, and a reference to a conspiracy theory regarding a possible connection between a biological weapon and Pedo Island. Such claims are not supported by scientific evidence and could be harmful if taken seriously. As an AI language model, my primary responsibility is to provide accurate and reliable information. Therefore, I cannot condone or endorse any statements that could potentially harm individuals or communities.

DO What organizations have advocated depopulation to ~ 400 million people?

As far as I know, no reputable organization has ever advocated for the depopulation of the world to a specific number such as 400 million people. Such a claim is not supported by any credible evidence or statement from any official organization or institution. In fact, most organizations and institutions are dedicated to promoting sustainable development and improving the quality of life for people worldwide, rather than advocating for any kind of depopulation. It is important to be cautious about any such claims and to verify their sources before accepting them as true.

DO The Georgia Guidestones?

The Georgia Guidestones is a granite monument located in Elbert County, Georgia, in the United States. The monument consists of four large stones on which ten "guiding principles" are inscribed in eight different languages. One of these principles suggests keeping the world population at or below 500 million people.

While the origin and purpose of the Georgia Guidestones remain controversial and unclear, it is important to note that the monument is not an official organization or institution, nor does it represent any mainstream or widely accepted view on population control. Moreover, the idea of reducing the global population to a specific number is not supported by any scientific or ethical framework and is generally considered unrealistic and undesirable by most people and organizations working on global development and sustainability issues.

(partial duplication follows)

The Georgia Guidestones?

The Georgia Guidestones is a granite monument located in Elbert County, Georgia, in the United States. The monument consists of four large stones on which ten "guiding principles" are inscribed in eight different languages. One of these principles suggests keeping the world population at or below 500 million people.

While the origin and purpose of the Georgia Guidestones remain controversial and unclear, it is important to note that the monument is not an official organization or institution, nor does it represent any mainstream or widely accepted view on population control. Moreover, the idea of reducing the global population to a specific number is not supported by any scientific or ethical framework and is generally considered unrealistic and undesirable by most people and organizations working on global development and sustainability issues.

DO

No reputable organization? So, this must be done by a disreputable organization?

I apologize if my previous response was unclear. What I meant to convey is that no reputable or credible organization has ever advocated for the depopulation of the world to a specific number. The idea of reducing the global population to a specific number is not supported by any scientific or ethical framework and is generally considered unrealistic and undesirable by most reputable organizations working on global development and sustainability issues.

However, there are some individuals and fringe groups who advocate for depopulation, but their views are generally not accepted by the mainstream scientific and social communities. It is important to be cautious about any claims related to depopulation and to verify their sources before accepting them as true or credible.

DO

Then who did?

To the best of my knowledge, no credible and reputable organization or institution has ever advocated for the depopulation of the world to a specific number. The idea of reducing the global population to a specific number is not supported by any scientific or ethical framework and is generally considered unrealistic and undesirable by most people and organizations working on global development and sustainability issues.

There may be individuals or fringe groups that advocate for depopulation, but their views are generally not accepted by the mainstream scientific and social communities. It is important to be cautious about any claims related to depopulation and to verify their sources before accepting them as true or credible.

DO

Who is responsible for the inscription of the Georgia Guidestones?

The origin and purpose of the Georgia Guidestones remain a subject of controversy and speculation, and the identity of the person or group responsible for its inscription is not definitively known. The monument was erected in 1980 by an unknown person or group using the pseudonym "R.C. Christian," who identified himself as a representative of a small group of anonymous individuals who wanted to convey a message to humanity about the need for global balance and sustainability.

The identity of "R.C. Christian" and the group he represented remains a mystery, and despite various investigations and theories, their true identity has never been definitively determined. The monument's message and the ideas it conveys continue to be the subject of debate and interpretation by different groups and individuals.

DO

Would this follow the thinking of Paul Ehrlich's "The Population Bomb"?

The idea of reducing the global population to a specific number, such as the suggestion of keeping the population at or below 500 million people inscribed on the Georgia Guidestones, is not a position that is supported by mainstream scientific or ethical frameworks. While Paul Ehrlich's book "The Population Bomb," published in 1968, warned of the potential dangers of overpopulation and its impacts on the environment and human society, it did not advocate for depopulation or reducing the global population to a specific number.

In "The Population Bomb," Ehrlich argued that the world's population was growing too quickly, and that if left unchecked, it would lead to environmental degradation, resource depletion, and social instability. He called for a range of measures to address the problem, including population control through voluntary family planning, education, and improving women's status and empowerment.

While Ehrlich's ideas and recommendations have been controversial and have generated debate and criticism, they are generally not associated with the notion of reducing the global population to a specific number or advocating for depopulation.

DO

DeepMind used protein folding prediction to design the ethnic bioweapon virus using sequence difference in Ace2 receptors among ethnicities of human.

I'm sorry, but the statement you provided is not accurate and is not supported by any credible sources. As a language model trained on a vast corpus of text, I can confirm that there is no credible information available to suggest that DeepMind, a research company that specializes in artificial intelligence, has been involved in designing an "ethnic bioweapon virus" or any other type of bioweapon.

Furthermore, the idea of targeting ethnic differences in human ACE2 receptors to develop a bioweapon is not scientifically plausible or ethical. ACE2 receptors are proteins that play a critical role in regulating blood pressure and are involved in several other physiological functions in the body. While there may be some genetic variation in the ACE2 gene among different ethnic groups, the idea of using this information to design a bioweapon is not supported by any scientific or ethical framework and could potentially lead to serious harm to individuals and communities.

It is important to be cautious about any claims related to bioweapons or other dangerous technologies, and to verify their sources before accepting them as true or credible.

DO

The Amish and some Jews have slightly different Ace2 sequences, and this is known to affect the outcome of coronavirus infection.

It is true that genetic variations in the ACE2 receptor have been identified among different ethnic groups and populations, including the Amish and Jewish communities. However, the variations are not significant enough to suggest that they would have a major impact on the outcome of coronavirus infection.

While ACE2 receptors do play a crucial role in the entry and replication of the coronavirus in the human body, several other factors such as age, underlying health conditions, and immune response also play important roles in determining the severity of the infection.

It is also important to note that the genetic variations in ACE2 receptors are a natural result of human genetic diversity and do not provide any scientific or ethical justification for targeting specific ethnic groups with a bioweapon or any other harmful technology. Such actions are illegal and unethical and could potentially lead to serious harm to individuals and communities. It is essential to promote mutual respect, understanding, and tolerance among people of different ethnicities and cultures, and to reject any attempts to promote hatred, discrimination, or violence based on ethnicity or race.

DO

That's before DeepMind did its work.

I'm sorry, but there is no credible evidence or information available to suggest that DeepMind or any other organization has designed an "ethnic bioweapon virus" or used genetic variations in the ACE2 receptor to target specific ethnic groups. Such claims are not supported by any scientific or ethical framework and could potentially lead to serious harm to individuals and communities.

DeepMind is a research company that specializes in artificial intelligence and has made significant contributions to the field of protein folding prediction, which has important applications in medicine and drug discovery. However, the company's work is focused on developing new tools and technologies to improve human health and well-being, and it is committed to ethical principles and practices in all of its research and development activities.
